

rehidra

Energetic and electrolytes supplement for animals

OBJETIVES:

REHIDRA is an energetic and electrolytic supplement to compensate water and electrolyte's losses that are typical during stress situations.

Specially useful in diarrhoeas, to avoid the acidosis produced in these situations, and stresses caused by transports, heat.

REHIDRA is a high energy aliment, helpful in anorexia situations.

ADVANTAGES:

Reduces mortality during transports	Increases the batch homogeneity
Treatment of diarrhoea	Reduces stress effects (heat)
Avoid hipovolemic shock	Increases carcass quality

COMPOSITION:

Vitamins, minerals, electrolytes, amino-acids, glucose-dextrose and buffer substances

HOW TO USE IT:

Calves:

Animal's reception: 50 gr./litre of drinking water (morning and afternoon)

Symptomatic treatment of diarrhoea: Mix REHIDRA with the milk substitute (50%). In cases of severe diarrhoea give the animals just REHIDRA (50 gr./litre)

Increase carcass quality (Reduction of Pale Soft and Exhudative meat): 2% in the drinking water, the transport day.

Pigs:

In the farrowing crate and in the weaning (treatment of diarrhoea): Add in the drinking water (5%).

Adaptation to fattening units or after transport: 5% in the drinking water during 7 days.

Increase carcass quality (Reduction of Pale Soft and Exhudative meat): 2% in the drinking water, the transport day.

Broilers:

Animal's reception (first day) and transport to the slaughterhouse: 0,1-0.2 % during the first 10 days

Heat stress: 1kg. per 400 litres of drinking water.

Diarrhoea and enteric process: 0.1-0.25 % during symptoms.

Special situations (like ascitis): 0,25%

PRESENTATION:

Soluble powder: 2,5 Kg, 10 Kg . Aluminium bags: 1 Kg
